

KAMESHWAR V

DevOps & Cloud Engineer

Puducherry, India | +91 8190043052 | kameshtech1@gmail.com | linkedin.com/in/kameshwar-vivekananthan | github.com/kam-rep

PROFESSIONAL SUMMARY

Results-driven DevOps & Cloud Engineer with 2.7 years of hands-on experience building and operating scalable, production-grade infrastructure across AWS and GCP. Proficient in Kubernetes orchestration, GitOps with ArgoCD, CI/CD automation, and platform engineering. Experienced in implementing observability using Prometheus, Grafana, and ELK, secrets management, and Terraform-based infrastructure-as-code. Actively deepening expertise in Istio service mesh and advanced observability through hands-on POC projects. Proven track record of maintaining 99.9% uptime in SLA-driven healthcare environments. Demonstrated cross-functional leadership as module-level project coordinator and product owner for the Medical Coding Module at RCM.

CORE TECHNICAL SKILLS

Cloud	AWS (ECS, ECR, Lambda, API Gateway, Route53, ALB/NLB, CloudWatch, SES, SNS, SQS, ACM, DocumentDB, ElastiCache, VPC) GCP (GKE, Cloud Run, Secret Manager, Pub/Sub, Cloud Logging, WAF)
Containers & K8s	Docker, Kubernetes, Helm, Kustomize, Istio Service Mesh, Autoscaling (HPA)
CI/CD	GitHub Actions, GitLab CI, TeamCity, Jenkins, ArgoCD, SonarQube, SonarCloud
IaC & Scripting	Terraform, Bash, YAML, Ansible (basic), Python (basic)
Observability	Prometheus, Grafana, CloudWatch, ELK Stack (Elasticsearch, Logstash, Kibana), GCP Cloud Logging, Alerting, Dashboards
Networking	VPC, Nginx (reverse proxy/LB), Ingress Controllers, TLS/SSL, Firewall Rules, DNS, ALB/NLB
Databases	MongoDB Atlas, MySQL, DocumentDB, Redis, Kafka, SQS, ElastiCache
Security	DevSecOps, SonarQube, SonarCloud, OWASP Dependency Check, Snyk, Trivy, IAM, Secrets Manager, mTLS, Cloud Armor, WIF
Tools	Linux, systemd, PM2, tmux, n8n, Jira, Figma (product collaboration)
Practices	GitOps, Platform Engineering, Event-Driven Architecture, Agile/Scrum, Incident Response, Disaster Recovery, Cost Optimisation, FinOps

PROFESSIONAL EXPERIENCE

DevOps & Cloud Engineer | Twilight IT SolutionsOct 2024 – Present

RCM Healthcare Platform GCP · GKE · ArgoCD · Helm · Kafka · Secret Manager · Terraform · n8n · MongoDB · Dataflow

- Designed and deployed healthcare microservices platform on GKE using Kustomize overlays, reducing deployment cycles to 3–5 minutes with ArgoCD GitOps automation
- Implemented Kubernetes rolling update strategy with readiness, liveness, and startup probes, achieving 99.9% uptime and zero-downtime production releases
- Configured GKE HPA autoscaling policies, achieving 30–40% better resource utilisation under variable workloads
- Built event-driven secrets propagation workflow: Secret Manager → Pub/Sub → Cloud Run → GKE, enabling automated zero-downtime credential rotation and reducing manual secret rotation effort by ~80%
- Integrated Kafka-based event-driven architecture for real-time notifications and asynchronous processing, decoupling 5+ service dependencies
- Configured MongoDB Atlas production cluster with daily automated backups, point-in-time recovery, and disaster recovery runbooks ensuring minimal data loss and rapid restoration
- Set up centralised observability using GCP Cloud Logging and monitoring dashboards, reducing mean time to detect (MTTD) production incidents by ~40%

- Implemented FinOps cost optimisation strategies using GCP resource tuning and autoscaling, reducing cloud infrastructure costs by ~25–30%
- Performed production incident troubleshooting, RCA documentation, and post-mortem facilitation across 15+ incidents with zero repeat failures
- Led Agile ceremonies (sprint planning, backlog grooming, release readiness) and delivered bi-weekly stakeholder demos as module-level project coordinator for a team of 6
- Mentored junior engineers in Kubernetes, CI/CD pipelines, and cloud best practices, accelerating team onboarding

Medical Coding Module — *Product Owner / Module Coordinator (alongside DevOps role)*

- Owned end-to-end delivery of the Medical Coding Module within RCM — gathered requirements from stakeholders, translated them into user stories, and defined acceptance criteria
- Collaborated with UI/UX designers to define and deliver high-fidelity Figma wireframes for every screen, driving all product decisions and ensuring alignment with client expectations
- Conducted structured client reviews and sign-off sessions for each module screen, incorporating feedback iteratively before developer handoff
- Bridged product and engineering by clearly communicating screen-level requirements and business logic to developers, reducing rework and sprint spillovers

Perla 2.0 Platform *AWS · ECS · Terraform · CloudWatch · ALB · Route53 · API Gateway · SES · GraphQL*

- Designed containerised Next.js application deployments using Docker and AWS ECS with blue/green deployment strategy for zero-downtime releases
- Automated multi-tenant onboarding — provisioning ECS services, ALB target groups, Route53 DNS records, and environment isolation via Terraform modules, cutting onboarding time from 2 days to under 2 hours
- Integrated CloudWatch monitoring, custom metric alarms, and log aggregation providing full production observability across 10+ microservices
- Achieved 22% infrastructure cost reduction through right-sizing ECS task definitions and reserved capacity planning
- Managed TLS lifecycle, API Gateway integrations, and secure VPC networking with private subnet isolation for backend services

DevOps Engineer | *Appexperts Pvt Ltd Oct 2023 – Dec 2024*

Askre — Real Estate Platform *AWS · Docker · Jenkins · ECR · IAM · EC2 · ACM · ALB · Route53 | Apr 2024*

- Built CI pipeline to containerise application code into multi-stage Docker images with encrypted build artifacts and SonarQube code coverage reporting
- Configured CD pipeline deploying to AWS infrastructure (ECR, EC2, ALB, Route53, ACM) with standardised git branching and commit practices
- Worked on AWS infrastructure components including IAM role management, ACM certificate provisioning, and ALB routing configuration

RevCord — Financial Crime Platform *Snyk · SonarQube · OWASP Dependency Check | May – Jul 2024*

- Performed SAST and dependency vulnerability analysis across 16 repositories including Android and iOS codebases using Snyk, SonarQube, and OWASP Dependency Check
- Generated detailed vulnerability reports with risk-based prioritisation and recommended dependency upgrades and version migrations to remediate findings

TMCMF — Healthcare 3D Implants Platform *TeamCity · SonarCloud · S3 · AWS · Azure | Aug – Dec 2024*

- Created CI/CD pipelines with integrated static code analysis (SonarCloud), unit testing, and Docker image vulnerability scanning for a globally distributed surgical implants platform
- Implemented git branching strategy and approval-gated promotion process for staging and production releases in collaboration with development and QA teams
- Configured approval workflows in CI/CD pipelines requiring sign-off from respective leads before promoting builds to production or staging environments

Other responsibilities across Appexperts projects:

- Deployed and managed 15+ containerised applications on Docker/Linux infrastructure for platforms serving 50K+ users
- Built and maintained CI/CD pipelines using GitLab CI, reducing build-to-deploy cycle from 45 to 12 minutes
- Configured Nginx reverse proxy and load balancing for high-availability deployments with SSL termination

- Performed DevSecOps vulnerability assessments using OWASP ZAP, Snyk, and OWASP Dependency Check — remediating 30+ critical CVEs
- Managed MySQL databases at infrastructure level — connection management, data dumps, scheduled backups, and data retention and deletion policies
- Standardised runtime environment management using systemd and PM2 across development, staging, and production

DevOps Intern | Appexperts Academy *Apr 2023 – Sep 2023*

- Built end-to-end CI/CD pipelines using GitHub Actions and containerised applications with Docker
- Assisted infrastructure provisioning and deployment automation on Linux servers
- Collaborated with development teams on environment configuration and issue troubleshooting

SELF-INITIATED PROJECTS & POCS

Istio Service Mesh (*GKE · Istio · Kiali · Envoy*)

- Deployed Istio on a local GKE cluster; configured mTLS between services, implemented traffic splitting for canary releases, and explored Envoy-based rate limiting and circuit breaking
- Visualised service-to-service traffic using Kiali dashboard; documented learnings for future production adoption

Prometheus + Grafana Observability Stack (*Kubernetes · Prometheus · Grafana · Alertmanager*)

- Set up Prometheus scraping and Grafana dashboards using the RED method (Rate, Errors, Duration) on a local Kubernetes cluster
- Configured Alertmanager routing rules and incident notification; explored PromQL for custom metric queries

GitOps — Production Implementation (*GKE · ArgoCD · Helm · Git*)

- Migrated GKE workloads from manual kubectl deployments to ArgoCD-managed GitOps, enabling declarative, auditable, and self-healing delivery pipelines

Terraform IaC (*Terraform · AWS · GCP*)

- Refactored manually provisioned cloud resources into modular, reusable Terraform codebase, enabling reproducible and version-controlled infrastructure across environments

Helm Chart Library (*Helm · Kubernetes*)

- Developed standardised Helm chart templates for 8+ microservices, enforcing consistent deployment patterns and cutting new service onboarding effort from days to hours

CERTIFICATIONS

- **AWS EKS — Getting Started with Amazon EKS** (*In Progress — AWS Skill Builder*)
- **Certified Kubernetes Administrator (CKA)** (*In Progress*)

EDUCATION

B.Tech — Mechanical Engineering *Pondicherry University*

MBA — Master of Business Administration *Pondicherry University*
